

Model:
SVRS-10ADJ

Safety Vacuum Release Systems

Vacless Safety Vacuum Release Systems are **certified for residential and commercial use** throughout the pool and spa industries. Vacless Breathers simply attach directly to the suction side drain plug port or on the suction port for pot-less pumps. They can be used on new or existing pumps from **0.5 horsepower to 10.0 horsepower** and have an operating range of 5 In Hg to 23 In Hg at 6 feet below water level to 8 feet above water level. Vacless Systems also act as winterization devices and startup surge suppressors.

- **Easy to Install - No Tools Required**
- **ANSI/ASME A112.19.17 Certified**
- **Meets SVRS Requirements of Virginia Graeme Baker Act**
- **Recognized by the CPSC as an approved SVRS manufacturer**

Automatic Breather I Products

Vacless Automatic Breathers provide immediate vacuum relief upon entrapment by allowing atmospheric air to rapidly fill the pump pot causing it to lose prime. Upon release of an entrapment, the valve will automatically reset allowing the pump to re-prime for normal operation. Automatic Breather valves are for use on Suction Lift (above water level) or Submerged Suction (below water level) applications.

Automatic Standard Vertical Installation

Automatic Standard

Standard valves are optimal for use on shorter pipe configurations associated with spas, hot tubs, and pools situated nearby the pump.

Model SVRS-10

Automatic Adjustable

Adjustable valves are factory preset and may be easily field adjusted to the vacuum levels present on lengthier pipe configurations.

Model SVRS-10ADJ

Manual Breather II Products

Vacless Manual Breathers provide immediate vacuum relief upon entrapment by allowing atmospheric air to rapidly fill the pump pot causing it to lose prime. Upon release of an entrapment, the valves are manually reset for normal operation. Manual Breather valves are for use on Suction Lift (above water level) applications only.

Manual Adjustable Angled Installation

Manual Standard

Standard valves are optimal for use on shorter pipe configurations associated with spas, hot tubs, and pools situated nearby the pump.

Model SVRS-20

Manual Adjustable

Adjustable valves are factory preset and may be easily field adjusted to the vacuum levels present on lengthier pipe configurations.

Model SVRS-20ADJ

Electrical Breather III Products

Vacless Electrical Breathers provide immediate vacuum relief upon entrapment by allowing atmospheric air to rapidly fill the pump pot while simultaneously turning off the pump. Electrical units include a three minute time delay restart and audible alert. Electrical Breather valves are for use on Suction Lift (above water level) or Submerged Suction (below water level) applications.

Electrical Adjustable Angled Installation

Electrical Standard

Standard valves are optimal for use on shorter pipe configurations associated with spas, hot tubs, and pools situated nearby the pump.

Model SVRS-30

Electrical Adjustable

Adjustable valves are factory preset and may be easily field adjusted to the vacuum levels present on lengthier pipe configurations.

Model SVRS-30ADJ

Meets SVRS Requirements of Virginia Graeme Baker Act
